

ThinManager

RELEVANCE

Applications and information
can now be delivered
based on location.

RELEVANCE PROVIDES MOBILE ENVIRONMENTS THE ABILITY TO DELIVER THE RIGHT APPLICATIONS TO THE RIGHT PERSON AT THE RIGHT TIME & PLACE.

RELEVANCE

Deliver your applications to mobile devices* as easy as you deliver them to PCs and thin clients.

Relevance extends your ability to manage every device by bringing a powerful mobile administration toolset to the award-winning ThinManager thin client management platform. Applications and information can now be delivered based on location. This will allow your staff the option to have information automatically become available on mobile devices upon entering an area or scanning an ID. Then, upon leaving the area, the information will be removed from the screen or hidden unless accessed by an authorized user.

Other features include the ability to share screen information with other devices based on proximity or login. Now an administrator can see the same screen on his mobile device that a technician is accessing on a computer without having to look over the shoulder or switch seats. The access can be view only or interactive.

ThinManager Relevance is ultra-secure as all data is stored on secure central servers and no data is saved locally. If a device is lost or stolen, no information or administrative paperwork is compromised.

*Requires iTMC mobile client available from the Apple App Store.
